Hi Mark,

We're really happy to have you onboard 🙂. Below you'll find a quick roadmap to success, but if at any time you need a hand, we're here to help. You can reply to this email with questions, use the in-app chat, or we can set up a time to walk you through the app in real-time. Let's get started.

- Create your first test in 10 minutes
- Next, edit your test in the visual editor. Add or delete steps, add validations, conditions, or create reusable components like shared steps or groups
- Run your test locally. If it failed, here are some troubleshooting tips
- View or adjust the Smart Locators
- Try experimenting by adding JavaScript to a custom step
- Connect to your CI, or branch tests to sync with code in GitHub
- Invite team members

Best,
Rosie O'Brien, Testim.io

P.S. Using the app requires the Testim Chrome extension to record user flows and control the browser on playback. Don't worry; the extension is only for your testing. You can check out our privacy policy here.
